Abstract (en)
[origin: EP2568072A1] In a clothing-processing device including a casing (41) having an opening (40) into and from which clothing is brought on a front surface, a lid body (52) covering the opening (40), and a hinge (87) for opening and closing the lid body (52), the hinge (87) is provided with substantially L shape coupling members (86) having first parts (86a) protruding forward with one ends fixed to an opening edge of the casing (41), and second parts (86b) protruding outward on the side from the other ends of the first parts (86a), the second parts (86b) turnably supporting an end edge of the lid body (52) at front ends, cutouts (88) are formed in the end edge of the lid body (52), the front ends of the second parts (86b) of the coupling members (86) are positioned in the cutouts (88), and the second parts (86b) are accommodated in the cutouts (88) when the lid body (52) is closed. Thereby, a gap between the end edge of the lid body (52) and the casing (41) can be reduced.
