Abstract (en)

[origin: EP2568250A2] The device (2) has a sealed container (6) for storing a weapon, and a supplying unit for supplying the weapon, where the device is disconnected from a transport unit on sea bottom. A recognition unit recognizes a target device i.e. sonar system. Four support legs (12) store the device on the sea bottom and are designed as hydraulic telescopic cylinders. The container is formed by a tubular body, and lids (22) are swingably arranged at ends of the tubular body for locking the container in a pressure-tight manner. A connecting part (10) is arranged at an outer side of the container. An independent claim is also included for a submarine.
