Abstract (en)
[origin: WO2011141323A1] The invention relates to a device for spraying a fluid, having a spray pipe comprising a plurality of pipe segments that can be collapsed into each other and extended in a telescoping manner, wherein an outlet for the fluid is disposed at the front end of the spray pipe and an outlet hose fed through the spray pipe is disposed at the outlet and protrudes out of the back end of the spray pipe and is connected to an actuator disposed on the side on a pipe segment, to which actuator a supply hose can be connected. In order to refine the device such that said device comprises simpler operation, the actuator is mounted on the pipe segment in an axially adjustable manner.
