Abstract (en)

[origin: WO2011141354A1] The invention relates to a cleaning system (1) that comprises: a carrier (10) movable in a longitudinal direction (X); a washing head (30) pivotally mounted on a front surface of the carrier (10) and about an axis of said washing head (30); at least one vertical rinsing line (50) mounted on the carrier (10) so as to be capable of moving between a first position in which said line diffuses a rinsing fluid in a transverse direction (Y) and a second position in which said line diffuses the rinsing fluid in the longitudinal direction (X); a control device adapted so as to control the supply and pivoting of the washing head (30) during a washing operation, and so as to control the supply and movement of the vertical rinsing line (50) during a rinsing operation.
