Abstract (en)

[origin: WO2011141056A1] The invention relates to a sensor arrangement in locking systems having at least one knob (2). The sensor arrangement is intended to determine the locking state of the locking system and the opening degree of the object to be opened or closed by means of the locking system, wherein said object in particular is a door or a window. According to the invention, at least one magnetometer (4) and at least one rotation sensor (5) are arranged inside the knob (2).
