Abstract (en)
[origin: WO2011141677A1] This fitting comprises an opening leaf equipped with a control linkage (2) and mounted such that it can move on a fixed frame between an open position and a closed position, a slideway (3) delimiting an opening (30) having a first portion (300) extending along a longitudinal axis (X'-X), an articulated arm (4) having a first end (40) mounted with the freedom to rotate on the fixed frame or on the opening leaf, and a second end (41), which is the opposite end, mounted to slide in the opening between a first position in which the opening leaf is in the closed position, and a second position in which the opening leaf is in a predetermined open position, and is notable in that the opening has a second portion (301) extending in a direction (Y'-Y) that is oblique with respect to the longitudinal axis and shaped to receive the second end of the articulated arm in a second position, and in that the linkage is designed to cause the articulated arm to rotate between a locked position and an unlocked position.
