Abstract (en)

[origin: EP2570160A1] The heel unit has a binding body, at which two coupling projections (16) are movably held for coupling to a heel portion (110) of a tour boot (100). A movable support is adapted for the coupling projections such that the coupling projections move away from a gliding board plane (E). The movable support is designed such that the coupling projections move along a moving direction, and proceed diagonally from the gliding board plane to a gliding board normal.
