Abstract (en)

[origin: EP2570541A1] The tool bar has a knitting tool assembly (4) fixed to a fastening section (16) of a body (2). Edge of the body is adjacent to the knitting tool assembly to surround the fastening section in a clamping manner from outer side. The knitting tool assembly is engaged around the edge, and comprises a base or tool bar holder (7) and a clamping element, which is resiliently biased towards the base. The clamping element is actuated by a tightening device, and generates clamping force between the clamping element and the base, where clamping force is greater than spring bias.
