Abstract (en)
The invention includes a built-in light (1) for installation in building elements such as ceilings and cabinets, where the light has a light source (2) which is installed in a housing (4), where the light source (2) radiates light via a front plate (3), and where there is an air gap (15) between the light source (2) and the front plate (3), and where the housing (4) is connected to a cable connection or transformer unit (6) via a flexible belt (5). The flexible belt (5) in the product ensures that separate units (4, 6) in the built-in light (1) can simply and cheaply be connected mechanically and easily installed in for example in ceilings or cabinets.
