Abstract (en)

[origin: WO2011144812A1] A bag filter comprises a hole plate (4) as well as elongated filter elements (6) installed in apertures (5) of the hole plate. In a first step, a damaged filter element (6) is detected, and in a second step, a separate plugging piece (12) is fed into the aperture (5) of the hole plate that corresponds to the damaged filter element, in such a way that the plugging piece (12) blocks the flow from the filter element (6) to the outside of the aperture.
