Abstract (en)

[origin: WO2011143785A1] A container (100) for storing a sensitive or aggressive product is disclosed. The container comprises a hollow basic body (110) made of natural glass. A plunger (120) is arranged displaceably in the interior of the basic body. In order to seal the container so as to be diffusion-proof, the basic body is sealed at a distal outlet opening (111) and at a proximal actuating opening (113) by respective seals which can be removed and/or severed and are sealed in a materially bonded manner onto a supporting surface surrounding the particular opening. The seals can be sealed, in particular inductively, onto the respective supporting surfaces.
