Abstract (en)

[origin: DE102010020691A1] The method involves generating a suction flow for extracting and dosing the bulk material with an injection-dosing pipe (9). The injection-dosing pipe is immersed in an extraction area (7) of the bulk material. The lower pressure of the suction flow is adjusted by suction of an air flow (L-D) as transport air on a value. The air flow stands under atmospheric pressure or low pressure. An independent claim is also included for a device for executing a bulk material conveying and dosing method.
