Abstract (en)

[origin: WO2011144437A1] The invention relates to a method for operating a closing device, wherein a closing element (2) can be moved in a first direction with the aid of a drive motor (4), wherein a coupling device (11) is provided for coupling the drive motor (4) mechanically to the closing element (2), wherein the coupling device (11) has a wrap spring unit, in order to bring about a self-locking action if no moment acts on the drive side on the coupling device (11) in an opening direction which is opposite to the closing direction, wherein the mechanical coupling between the drive motor (4) and the closing element (2) has a play; having the following steps: operation of the drive motor (4) to move the closing element (2) in the first direction; and if the movement of the closing element (2) in the first direction is to be stopped, operation of the drive motor (4) in order to move the closing element (2) in a second direction which is opposite to the first.
