Abstract (en)
[origin: WO2011144354A1] The invention relates to a method for producing a coating composition having reversible color shade change properties, for rendering polymer paint-based substrates UV-absorbing. According to said method, a solvent (A, B) is first mixed with an acrylate-based binder (C). A photochromic dye (H) is then added to the solution (A, B, C). The paint produced this way is applied to the substrate and cures.
