Abstract (en)
[origin: WO2011144409A1] The invention relates to a burglar-proof wall comprising at least one wall section. The wall may in this case have one or two wall sections arranged parallel to one another. Each wall section consists of a number of panels arranged parallel to one another, for example plasterboard panels. Instead of a metal grid or a steel plate, a reinforcing fabric is arranged between these two panels, preferably without an intermediate space. This reinforcing fabric can be easily arranged between the two wall sections and consists for example of plastic. Such a burglar-proof wall ensures at least the same protection from burglary as burglar-proof walls provided with metal grids or steel plates. The burglar-proof wall according to the invention can be assigned to Class WK 2 and also complies with the requirements of DIN EN 1627.
