Abstract (en)

Cutting machine, comprising a frame (1) on which are mounted piece-holder carriage (2) and a blade-holding arm (3), wherein the latter is hinged on a upright (4) fixed to the frame (1) by means of a pin (5) which is housed in a sleeve (6) supported by the upright (4) and oriented parallel to the top surface of the carriage (2) and orthogonal to the upright (4), wherein the blade-holding arm (3) is at a side of the upright (4) and is mounted on a portion of the pin (5) which protrudes beyond said sleeve (6) so that it can freely rotate about the axis (x-x) of the same pin (5). The cutting machine is provided with means for adjusting the spatial orientation of the pin (5) with respect to the sleeve (6).
