Abstract (en)

[origin: EP2572844A1] The supporting device has a comb-like support structure (2) having ridge slots (6) and a planar supporting surface (7) which is arranged at an acute angle to horizontal and vertical planes. A sliding element (4) has several parallel projections (8) with respective free ends (9). The sliding element is arranged away from alignment plane. The sliding element is arranged perpendicular to the alignment plane so as to align the stack during the horizontal displacement of sliding element.
