Abstract (en)  
[origin: EP2402173A1] The method involves unpacking a finished laminate panel (102) with a core that is made of a wood material from a transport-safe packing unit (104). A priming coat in a form of a resin layer and a primer are arranged on an upper side of the core. A coating is arranged on a top side of the core, and is located opposite to a lower surface of the core. Connecting and locking devices are arranged at opposite sides of the core. A decorative layer with a decoration part is applied on the priming coat or the primer. A top layer is applied on the decorative layer. An independent claim is also included for a device comprising a printing element for finishing a laminate panel.
