Abstract (en)
[origin: EP2573237A2] The method involves providing delivery device (6) for feeding fiber material (3) into spinning unit (1). A take-off device (7) is provided for drawing-off the yarn (5). A yarn monitoring unit (9) is provided for monitoring parameter of yarn wound by winding device (8). The yarn production is interrupted prior to switching off of spinning machine, when the yarn parameter is deviated from target value. The yarn production is interrupted by reducing speed of delivery device, take-off device and winding device such that yarn is located between outlet (4) and winding device. An independent claim is included for spinning machine.
