Abstract (en)

[origin: EP2573462A1] The installation has a combustion chamber (3) including an outlet opening (5) supplied with fuel by a fuel supply system, where the outlet opening leads to a grid (13) for recovering the fuel. An enclosure (14) supplies a primary oxidant (15) that is intended to pass through the grid by primary passages. A secondary oxidant supply system supplies a secondary oxidant (19) to the combustion chamber, and an ignition device ignites the fuel in the combustion chamber. A cleaning system (26) cleans the grid by penetration of fingers (27) in the primary passages provided by the grid.
