Abstract (en)
   [origin: EP2575114A2] A controller (1) for a smoke, heat, and carbon monoxide alarm system automatically assigns one of a plurality of commands
   to a common user action button (10) press, according to circumstances. It assigns a test command if all of the alarm devices are in standby, a locate
   command if any of the alarm devices are alarming, and a hush command if its last command was a locate command. The processor activates output
   indicators to provide alarm condition information to a user, and there is a dedicated indicator (21-23) for each sensed condition. The processor
   controls the indicators (24-27) to inform the user of the command which would be assigned to a next button (10) press.
