Abstract (en)
[origin: GB2480653A] A protective helmet stand comprising one or more support members 16, the stand being moveable between a collapsed configuration and an expanded configuration; in the expanded configuration the stand is arranged to receive and support a helmet, using the one or more support members which are arranged to contact an outer surface of the protective helmet. The stand may comprise a central body 12 with two or more support members 16 moveably coupled to it. The stand may have a retaining member to secure the helmet to the stand, such as a sucker or an elastic string, mesh or net. The stand may be resiliently biased towards the expanded configuration. In the collapsed configuration the stand is preferably pocket-sized such that it may easily fit into a user's pocket when not in use. The stand may comprise an inflatable member, or a key ring attachment 18.
