Abstract (en)

[origin: WO2011151310A1] This device comprises two elements (28A, 28B) able to move relative to each other between an open position in which the volume of keratin fibers can be put into place and a closed position for confining the volume of keratin fibers in an intermediate space defined between the elements (28A, 28B), One of the mobile elements (28A, 28B) comprising a rigid portion (30A, 30B) and a deformable portion (32A, 32B) intended to be applied onto the volume of keratin fibers to match the shape of the volume of keratin fibers. The device (14) is arranged such that when in the closed position, the intermediate space (72) is closed off in a substantially leak tight manner when the volume of keratin fibers (11) is trapped between the two mobile elements (28A, 28B).
