Abstract (en)

[origin: WO2011151674A1] A method serves for manufacturing an epilatory strip (1). The method comprises providing a width of a first laminate (12) consisting of a pressure-sensitive, hot-melt adhesive (3) sandwiched between a support layer (2) and a first release liner (13), delaminating the width of first laminate (12) by unwinding the first release liner (13) and exposing an area (22) of pressure-sensitive, hot-melt adhesive (3), and providing a second release liner (8) to cover at least a portion of exposed area (22) of pressure-sensitive, hot-melt adhesive (3) to provide a width of epilatory strip material (25). Hypoallergenic, non-irritant epilatory strips are obtained using the method according to the invention.
