Abstract (en)
[origin: EP2390110A1] A process for the formation of sheets of tesserae of mosaic (F), in which the step of joining of each group of tesserae of mosaic ordered to form a chequered pattern envisages application from above of glue on an anti-adhesive substrate (6; 10) and positioning of the group of tesserae on the glue applied to the anti-adhesive substrate (6; 10) keeping the front faces of the tesserae facing upwards so as to cause the glue to adhere to the back faces of the tesserae. The anti-adhesive substrate may consist of a regenerable endless belt (6) or else of a discrete plate (10).
