Abstract (en)

[origin: WO2011152835A1] Methods and systems for producing packaged contact lenses are described. A stock product that includes a contact lens located in a contact lens packaging solution in a sealed contact lens package is provided. The stock product has one or more printing surfaces. The stock product is directed to a labeling station to produce a customer-tailored labeled product. The labeled product includes printed customer-specific indicia directly on the printing surface of the stock product. Manufacturing systems that include such labeling stations are also described. Utilizing the present methods and systems, contact lenses are labeled and supplied to different customers based on customer requirements.
