Abstract (en)

[origin: WO2011147858A1] The present invention relates to a device for gripping and adjusting the tension of an elongate element. The device is characterized in that the front clamping element (101) is movable with respect to the rear body (10) and includes a means (9) for securing to the jaws (3), which is active after said jaws (3) are placed into the clamping position, wherein the movement of said jaws (3) drives the thus-secured assembly (101) which then in turn pulls the elongate element (E) forward.
