Abstract (en)

[origin: WO2011151073A1] The present invention relates to a pump assembly (5) for a supply unit, in particular a tank container (1), comprising: a pump line (51; 51r, 1) for conveying a liquid medium between a container (3) and a removal connection, a pump (55) arranged in the pump line (51), and a feed connection (58), which is connected to the pump line (51) via two connecting lines (57). Here, the pump (55) acts between the two connecting points (57a) of the connecting lines (57) in the pump line (51). The medium can therefore be delivered as desired directly by the pump (55) between the feed connection (58) and the container (3), between the container (3) and the removal connection (52), or between the feed connection (58) and the removal connection (52). The invention further relates to a fuel supply unit having a pump assembly (5) according to the invention and a container (3).
