Abstract (en)
[origin: WO2011152780A1] The invention relates to a sheet metal profile (9a,b, 19a,b, 22a,b, 23a,b, 24a,b, 25) primarily intended for installation against parts of a building, for example for the protection of bargeboards (2) or other wooden component parts of the building, comprising a bent metal sheet having a central section and at least one lateral part (3a,b) with inward- folded edge sections (15a,b) at the bottom. The invention is achieved by the sheet metal profile (9a,b, 19a,b, 22a,b, 23a,b, 24a,b, 25) being of mirror symmetrical configuration at both end sections (11a,b, 17, 21a,b), and by the end sections (11a,b, 17, 21a,b) being provided with an inward- facing edge (13a,b, 21a,b) cut at an angle, that is to say one or both lateral parts (10a,b, 20a,b) of the sheet metal profile (9a,b, 19a,b, 22a,b, 23a,b, 24a,b, 25) are executed with angled end edges (13a,b, 21a,b), where the angle (v) between the upper plane surface (12) of the sheet metal profile (9) and the end edges (13a,b, 21a,b) of the lateral parts form an acute angle (v).
