Abstract (en)

[origin: WO2011146952A1] A device for blocking the pull-out movement of at least two pull-out furniture parts (1) which can be pulled out of a furniture body (3) in a pull-out direction (4) comprises, for each of the pull-out furniture parts (1), a driver (5), a body-fixed vertical guide rail (6) by which filling parts (7, 7') are mounted so as to be displaceable in the vertical direction, wherein each of the pull-out furniture parts (1) is assigned a filling part (7) which is mounted by the vertical guide rail (6) so that it can rotate about an imaginary horizontal axis (10), and furthermore, for each of the pull-out furniture parts (1), a locking part (11) which interacts with the driver (5) associated with said pull-out furniture part (1) and is adjusted by said driver (5) from a locking position to a release position when the pull-out furniture part (1) is pulled out and from the release position to the locking position when the pull-out furniture part (1) is pushed in, and which is coupled to the filling part (7) belonging to said pull-out furniture part (1).
