Abstract (en)  
[origin: WO2011147736A2] The invention relates to a refrigeration device. The device comprises: a body (2) that defines a storage compartment (4), said compartment (4) having a rear wall (4a) and a lateral wall (4c) that extends vertically; a low-pressure storage unit (7) having a storage chamber (32) from which air can be evacuated, which is constructed independently of the body (2) and is accommodated in the storage compartment (4); a fluid line (71) which is fixed in the body (2), one end of the fluid line being connected to an air evacuation device (70) and the other end lying exposed in the storage compartment (4) in order to be used as a first connecting piece (72) for a fluidic connection to the low-pressure storage unit (7); and a storage container (6) that is movably held in the storage compartment (4) and is located above the low-pressure unit (7). According to one embodiment of the invention, the first connecting piece (72) is located above the low-pressure unit (7).
