Abstract (en)

[origin: US2011290144A1] A re-locking device for a rocker arm detonator (1) of an armament, such as a hand grenade, irritation body etc., is formed by a security mechanism (3), which facilitates a repeat locking after activation of the armament. The re-locking device includes at least one profile part (4, 4'), which is pivotably arranged and able to engage with the armament by means of an expedient (9), especially with the ignition head (5, 5') and the rocker arm (2).
