Abstract (en)

[origin: WO2011147649A1] The invention relates to a method for producing a spectacle lens for a non-presbyopic person, said method having at least one zone with an optical action provided to reduce eyestrain. The invention is characterized by the following method steps: 1) providing the contour of the ready-to-wear spectacle lens and/or providing one or more visual points of the person through the ready-to-wear spectacle lens for one or more visual tasks in the vicinity, 2) fixing the least one constructional reference point of the zone and/or the extent of the zone and/or the optical action within the zone by using the contour provided and/or the visual points provided, 3) fabricating the spectacle lens with the zone. The invention also relates to a corresponding spectacle lens and to a computer program for performing the method according to the invention.
