Abstract (en)
[origin: WO2011147560A2] The invention relates to a system and method for generating an integration model, wherein starting in particular from a graphical representation of an operating sequence the following steps are carried out preferably on a graphical user interface: determining the software systems to be integrated, determining place-holders for variables for events or devices, determining place-holders for executable functions, determining place-holders for functionalities, configuring the software systems to be integrated as well as the components thereof, selecting object types and parameters, representing the parameters, generating an integration model code and checking the integration model code by means of simulation, thereby achieving the aim of providing a method by which an integration model can be generated without problems and can be checked for reliability.
