Abstract (en)

[origin: EP2390825A1] The method involves producing an assembly of a substrate (2) carrying an antenna (3), where the antenna comprises terminal connection portions (7b, 8b) resting on the substrate with substrate locations. The substrate includes an adhesive mass made of sheet or tape in contact with the antenna. A cavity (26) is formed near the location of the terminal connection portions by cutting a starting portion and/or end portion of antenna movement, where the substrate is continuous band or sheet. An independent claim is also included for a device comprising a substrate carrying an antenna.
