Abstract (en)  
[origin: WO2011148096A1] The system for secure teletransmission destined for a receiving person (22) comprises a secure server (3) comprising a program for providing a redemption code (ALEA) and a code for designating an object to which the teletransmission pertains. A terminal (1) comprises an interface for allowing a sending person (11) to indicate the designation code and to take cognizance of the redemption code (ALEA), and means for connection to the secure server (3) so as to send a request and to receive the redemption code (ALEA) in response. A terminal (5) comprises an interface for allowing the receiving person (22) to enter the redemption code and the designation code, means for connection to the secure server (3) so as to receive an authorization from the secure server (3) which confirms a correlation of the redemption code entered with the designation code, and means for automatically delivering the object after receipt of the authorization.
