Abstract (en)

[origin: WO2011151232A1] An optical system for occupancy sensing according to the invention comprises: a plurality of optical line sensors (101, 102, 103; 201; 301), each consisting of a linear array of light sensing elements (202); and an optical light integrating device (203; 302, 303) that integrates light from rays with incidence angles subject to geometric constraints to be sensed by a light sensing element (202).
