Abstract (en)

[origin: WO2011151589A1] The invention relates to a method for determining a profile for an application user/service pair to access data related to the operation of a communication network, or operation data, said data being needed in order to implement the application service at an application layer of a communication device. The method includes a step of determining the access profile on the basis of information related to a service level corresponding to the application user/service pair and on the basis of information related to an access policy associated with the operation data required by the application service. Said method also includes a step of storing the access profile related to the application user/service pair.
