Abstract (en)
Disclosed is a fastener with a more reliable Disengagement of a camp part, and improved operability then disengaging same. A clamp part comprises a base part (1) and an insert part (2). A button arm (11), a release button (12), and an upper hook receiver (13) are formed on the base part (1). A slide part (21), an engaging part (22), and an engaging hook (23) are formed on the insert part(2). A projection (15) is formed on the inner side of the upper end of the button arm (11). When the release button (12) is pressed, the projection (15) contacts an external incline face (25), a gap (5) is temporarily formed between the button arm (11) and a slide part (21).
