Abstract (en)  
[origin: EP2578278A1] The binding has a receiving area (4) for a ski boot (6), and a blocking device (14) arranged in the receiving area in a blocked position. The blocking device is arranged at an outer side of the receiving area in a released position. The blocking device is coupled to the binding and moved to the released position based on authentication. A locking device (16) locks the blocking device in the blocked position, and unlocked by a radio frequency identification-chip (18). The chip is fastened to the ski boot, where the blocking device is designed as a pin. Independent claims are also included for the following: (1) a method for releasing a ski binding and a ski (2) a method for locking a ski binding and a ski.
