Abstract (en)

[origin: EP2578499A1] The system has a control unit which is provided for temporarily switching the organs of packaging system (10) to power saving mode, in which the relevant organs require less energy than in mode of operation. The programs for controlling the packaging system and/or organs are stored in control unit, and are assigned to specific operating conditions of packaging system and/or organs. The operating states and/or disruption of packaging system and/or organs are recorded in control unit and the programs are automatically selected based on detected operating states and/or interruptions.
