Abstract (en)

[origin: EP2578733A1] Provided is a technique for significantly increasing the density of knitted stitches in an easy and economical manner without having to largely modify a configuration of a knitting machine, and obtaining a thin knit fabric with an excellent texture. In a knitting needle-guiding member of a knitting machine that knits a knit fabric by guiding knitting needles so as to reciprocate along a plurality of aligned needle grooves, the knitting needles having one or more hooks are arranged singly or plurally in an overlapping manner in each of the knitting needles, whereby at least two hooks integrally operating are included in one needle groove.
