Abstract (en)

[origin: EP2578762A2] The body (8) has a closed cavity enclosed by surface elements (2, 3) running in parallel and a sealing arrangement (4) running along a closed contour. Structural elements (5) are arranged in the cavity. The cavity is filled with a gaseous filling medium. An opening is provided for influencing the filling medium pressure in the cavity and/or for medium transport. The structural elements are made from material that is partially or completely impermeable for sunlight. Structural body openings are formed by the structural elements, where the surface elements are made from glass or plastic. The surface elements are designed as glass disks. An independent claim is also included for a building element.
