Abstract (en)

[origin: EP2578765A1] The window (1) has a frame with a top member (2), a bottom member (3) and two side members (4, 5) mutually connected in corner joints (6). Mounting brackets (10) are provided for installing the window in the roof structure, each mounting bracket (10) having a first leg portion (11) a second leg portion (12). The window (1) is adapted for installation in at least two predefined installation levels in the roof structure in that one of two leg sections (11 a, 11 b) of the first leg portion (11) comprises a flange (30) which is essentially perpendicular to the leg section, that the top, bottom and side members (2, 3, 4, 5) each comprise substantially longitudinally extending grooves (7; 8a, 8b) defining said predefined installation levels, such that when said mounting bracket (10) is placed with said flange (30) in engagement with one of the grooves (7; 8a, 8b), the window (1) may be installed in the installation level corresponding to that groove (7; 8a, 8b).
