Abstract (en)
[origin: EP2578774A2] A support (10) for containment system barriers (51), including telescoping tubes (12, 14) cylindrical about a first axis (15), a nut (24) secured to one of the tubes, a bracket (34) secured to the other of the tubes, a handle portion (20) cylindrical about a second axis (25) parallel to and spaced from the first axis, and a holder (48) adapted for securing to a vertical side of a barrier (51). The nut (24) has a threaded interior opening substantially cylindrical about the second axis. A threaded bar (26) is rotatably received in the nut (24), and is also secured against axial movement relative to the bracket (34) as well as being rotatable relative to the bracket (34). The handle portion (20) is secured to the one of the tubes (12, 14) with the bar (26) received in the handle portion, and the holder (48) is secured to the tubes adjacent the holder top and bottom.
