Abstract (en)  
[origin: EP2578775A1] A supporting device (1) for safety lines (100) comprises a supporting element (2) comprising a plate-shaped main body (3) and a portion (4) for mechanical coupling to a cable (101) of the safety line; - a first and a second wing (5) which are plate shaped, being rigidly fastened to a building structure, where at two opposite ends the main body (3) comprises a plurality of through slits (8) and where each wing has a plurality of protruding tabs (9) inserted in the slits of a respective side wall in order to produce a mechanical coupling between the main body and the respective wing, the wing being able to rotate about an axis of rotation (10) positioned along the main direction of extension of the slits.
