Abstract (en)

The post (101) has receiving areas (105, 106) for receiving surface element supports (120, 121), where the post is produced from a heat insulating material e.g. sustainable plastic such as PVC. The surface element supports support a surface element (102) i.e. glazing, from different opposite sides, where the post is integrally formed together with a middle closing seal (103) and a middle closing seal-counter element (104). An additional seal (107) forms a sealing end with a counter leaf (200) in a closed position of a leaf (100) relative to the counter leaf.

Abstract (de)

Es wird ein Flügelpfosten (101) für den Mittelschlussbereich (300) eines in einer Schieberahmenvorrichtung (10) relativ zu einem Gegenflügel (200) verschiebbaren Flügels (100) angegeben. Mit dem Ziel, die thermischen Isolationseigenschaften des Flügelpfostens (101) zu verbessern, sieht die erfindungsgemäße Lösung vor, dass der Flügelpfosten (101) aus einem wärmeisolierenden Material, vorzugsweise aus Kunststoff ausgebildet ist.
