Abstract (en)

[origin: CN103032147A] The invention relates to a coolant conveying device (1) with a coolant pump (2); the coolant pump is driven by a first driving device (6) and a second driving device through a planetary transmission mechanism (5), wherein the planetary transmission mechanism (5) comprises a first input shaft (7) for the first driving device (6) and a second input shaft (8) for the second driving device. A coupling device (22) is disposed, and the input shafts (7, 8) are directly intercoupled through the coupling device in at least one operation state. The invention also relates to a method of operating the coolant conveying device (1).
