Abstract (en)

[origin: EP2579391A1] The method involves connecting an end of a conductive metal core (12A) of a conductor (12) at an end (22) of an electrical connection device (20) by welding. An end of another conductive metal core (14A) of another conductor is connected at another end (24) of the connection device by crimping a deformable end (B) of an electrical terminal element (16) around the end of the latter core of the latter conductor juxtaposed at the latter end of the connection device. The cores of the conductors are connected to the connection device such that the cores are not connected with each other.
