Abstract (en)

An electronic imaging system for capturing and displaying the images in real time is disclosed, which includes a controller, a display device and a left to right mirror module. The controller has a camera lens and a transmission unit. The camera lens can capture the image signals. The transmission unit transmits the captured image signals. The display device has a receiving unit and a display unit. The receiving unit receives the image signal from the transmission unit of the controller, and the display unit displays the images received in real time. The left to right mirror module is used to mirror the image signal, which is then displayed on the display device.
